

CAPACITY BUILDING AND SKILL ENHANCEMENT

1. PROGRAMMING SKILLS

Programming skill enhancement is a continuous process of improving one's ability to write better code and develop more efficient software. It involves learning new programming languages, frameworks, and tools, as well as keeping up-to-date with the latest advancements in the field.

2.COMMUNICATION SKILLS

Communication skills are the abilities to effectively and efficiently convey information, thoughts, and ideas to others. These skills are essential in both personal and professional contexts, as they enable individuals to build relationships, collaborate with others, and convey their message clearly.

Good communication skills include several aspects, such as: Verbal communication: The ability to express oneself clearly and effectively through spoken language Nonverbal communication: The ability to communicate through body language, facial expressions, and tone of voice. Written communication: The ability to write clearly and effectively, using proper grammar, punctuation, and spelling. Listening skills: The ability to listen actively, understand others' perspectives, and respond appropriately. Presentation skills: The ability to deliver a compelling and engaging presentation, using visual aids and other techniques.

3. SPORT SKILLS

Sports skills are the abilities and techniques required to perform specific actions or movements related to a particular sport. These skills include physical abilities, such as strength, speed, agility, and

endurance, as well as technical skills, such as ball-handling, shooting, passing, and tackling.

Different sports require different sets of skills. For example, basketball requires skills such as dribbling, shooting, and passing, while soccer requires skills such as ball control, kicking, and teamwork. Individual sports, such as swimming or track and field, require skills such as speed, endurance, and technique in specific movements.

Developing sports skills requires consistent practice, dedication, and a willingness to learn and improve. This involves regular training sessions, drills, and practice matches, as well as studying the techniques and strategies used by top athletes in the sport.

4. ICT TOOLS - LEARNING SKILLS :

Information and communication technology (ICT) tools are software applications and hardware devices that are used to create, manage, and communicate information. ICT tools have transformed the way we live

and work, and have become essential in various fields, including education, business, and healthcare.

ICT tools have revolutionized the way we live and work, making it easier to access and share information, communicate with others, and collaborate on projects. They have also enabled new forms of work and learning, such as remote work and e-learning, which have become increasingly important in recent years.
